The Cost of Bad Rigging

Loss: \$250,000

An industrial blower was dropped and destroyed because a \$24.00 shackle had stripped threads.

Loss: Worker's life time disability and costs.

A steel plate was dropped on a worker, severing his foot, due to a worn plate clamp

Loss: \$300,000

A deformed crane hook failed lifting a beam narrowly missing three workers and damaged a custom home.

Easily prevented with a rigging compliance program!

On-Site Certifications

WorkSafeBC requires all rigging to be thoroughly inspected at least annually by a qualified person. Each chain sling requires a proof of inspection document.

Fulford inspectors visually inspect and tag your rigging and complete load test certifications for chain slings and manual lever hoists up to 120,000 lbs on your site with our mobile test unit.

Fulford's services range from inspection to the development of a full on-line rigging inventory systems using RFID tags.

Our on-site inspection and certification:

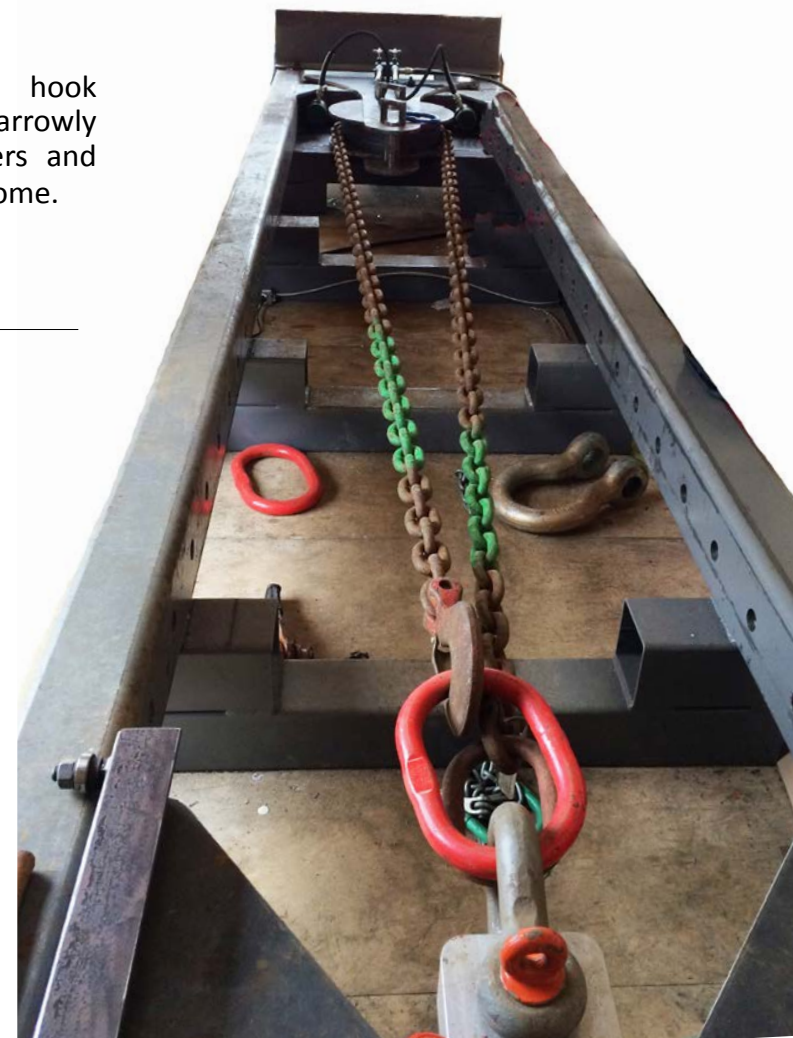

- Cuts the cost and inconvenience of shipping rigging off for certification
- Keeps your crucial rigging gear available at all times
- Can complete most repairs on-site
- Provides third party sign-off on ALL your rigging
- Knowledgeable inspectors to assist with rigging enquiries and advice on rigging safety programs

Enabled with
RFID Inspection
System

Calibrated to
ASTM-E4-07

When we come to your site we:

- Take a full inventory of your rigging and lifting equipment
- Create a site specific database that can be accessed online by you at any time
- Leave you with a copy and online access to a database that is your proof of regulatory compliance and can be shown to regulatory authorities at any time
- Inspect your rigging and, when needed, complete repairs on site
- Perform proof load and destructive testing on rigging and components up to 120,000 lbs
- Attach new capacity plates to rigging if they are missing or illegible
- Attach RFID tags to chain slings and other hoisting equipment for ease of identification and on-going database tracking
- Attach visual inspection tags to all rigging to enable your crews to verify that the rigging has been inspected
- Provide access to your specific database so you can print off the test certificate(s) of your rigging equipment as you require
- Provide demonstrations to your personnel of rigging items that were found to be defective/damaged
- Assist with safety, rigging and crane safety program development and review
